THE LITERATURE OF AGING PEDESTRIANS  
AND DRIVERS: A BIBLIOGRAPHY

N. L. Grow

Fall 1972

UNC/HSRC-72/10/2

# **The Literature of Aging Pedestrians and Drivers: A Bibliography, 1962-1972**

**NEVILLE L. GROW, JR.**

Prepared for the University of North Carolina Highway Safety Research Center  
Symposium on Highway Safety. Aging and Highway Safety: The Elderly in a  
Mobile Society, October 17 and 18, 1972.

The study of elderly people in highway traffic as pedestrians and vehicle drivers has not been neglected. However, the references to such studies are scattered. Were it possible to obtain all literature references of this important topic from one source, there would be little need for this listing. The purpose of this bibliography is to draw together as many relevant references as can be identified for the ten-year period from 1962 to the present. It should be specifically noted by the user, that this listing should not be considered to be exhaustive. It should also be noted that critical assessment and abstracts of the listings are not within the scope of this compilation.

The search strategy used here was multi-disciplinary. Particular emphasis was placed on the literature of psychology, medicine and engineering. Most of the references pertain directly to the consideration of the aged pedestrian and the aged vehicle driver. Many, though, are of peripheral application. While these latter references do not directly relate to drivers or pedestrians, germane information is presented concerning factors frequently associated with the aging process.

The references given here have been verified in either *Psychological Abstracts*, *Index Medicus*, *Engineering Index* or

*Highway Safety Literature.* A few reports could not be verified in any of these sources. This bibliography can serve as citation source. Wherever possible, additional information has been provided to aid in obtaining the material from the publishers. With the information given in any case, the user of this bibliography should have little difficulty obtaining these materials from library resources.

The efforts of Miss Cynthia Slate in the construction of this work were indispensable and greatly appreciated. Appreciation must also be expressed to Dr. Patricia F. Waller and Dr. B. J. Campbell for providing the opportunity for the creation of this bibliography.
